

Clear Chrome Browser Cache on Windows PC

1. Open Google Chrome and click the 3 dots in the top right (circled in image below). This will bring up a drop down menu with several options. Hover your cursor over More Tools and another menu will open – select “Clear browsing data” in that submenu.

2. In the menu that opens, make sure to check “Cookies and other site data”, and “cached images and files”. You *can* select Browsing History, but you do not have to. After you have checked the boxes, click Clear Data.

3. Afterward, be sure to exit Google Chrome and open a fresh session by relaunching the application.
